Architect Barron Schimberg Merges Art and Efficiency in a Florida Green Standard Luxury Waterfront Residence in Sarasota, Florida

[Sarasota, FL – October 9, 2007] Architect Barron Schimberg's design for a 4,000 SF contemporary residence followed the Florida Green Building Standards and incorporates the concepts of utilizing natural breezes, highly efficient mechanical systems and environmental materials. Schimberg positioned the house on the site in order to maximize the beautiful views of Sarasota Bay and the surrounding canal. While incorporating the client's desire for a California contemporary style house, Schimberg fuses modern elements with a pavilion concept to create a truly unique custom Florida home.

Completed in June 2007, the residence has received the Florida Green Home Standard Certification issued by the Florida Green Building Coalition and the Energy Star certification with a 91.7 Home Energy Rating Score.

This Schimberg design is a perfect testament to the fact that the highest levels of sustainable construction and the environmentally-conscious choice of materials can merge seamlessly with an artistic architectural statement that is ultimately livable and personal.

We invite you to step inside to experience the flow of space and materials in a remarkable home designed to emphasize its relationship to a beautiful bay and stunning sunsets.
